Professional Summary

B.Tech CSE (AI & ML) student at GD Goenka University with a CGPA of 9.16/10 and hands-on experience in Python, SQL, data cleaning, exploratory data analysis, and Power BI. Skilled in data validation, KPI analysis, and interactive dashboard development. Seeking a Data Analyst or BI Analyst internship to deliver actionable, data-driven insights.

Education

GD Goenka University — Expected 2024-2028
B.Tech, Computer Science and Engineering (AI & ML); CGPA: 9.16/10 — Gurugram, Haryana

Sri Chaitanya College
Intermediate (MPC); Percentage: 93.9% — Hyderabad, India

Technical Skills

Programming: Python **Libraries:** Pandas, NumPy
Data Analytics: Data Cleaning, EDA, Data Validation, Matplotlib, Seaborn
Databases: SQL, MySQL **BI:** Power BI, KPI Analysis, Dashboard Development
Tools: Excel, Git, GitHub, Jupyter Notebook, PyCharm

Projects

E-Commerce Business Analytics & Customer Intelligence GitHub

- Analyzed Brazilian Olist e-commerce data using MySQL to evaluate sales performance, product categories, customer purchasing behavior, payment methods, seller performance, and geographic trends.
- Developed structured SQL analyses using joins, aggregations, conditional logic, and date-based analysis to evaluate business KPIs and identify performance patterns across key dimensions.
- Evaluated customer purchasing behavior and identified a 3.00% repeat-customer rate among purchasing customers, highlighting opportunities to strengthen customer retention.
- Assessed delivery performance across 96,470 eligible delivered orders, identifying a 91.89% on-time-or-early delivery rate and examining the relationship between delivery delays and customer review scores.
- Built a four-page Power BI report covering executive sales performance, product and category analysis, customer and geographic insights, and delivery and customer experience. Documented SQL methodology, data-quality checks, validated findings, and actionable business recommendations.

Retail Sales Performance & Profitability Analytics GitHub

- Analyzed approximately 49,975 retail records using Python, Pandas, and NumPy to evaluate sales, profitability, product categories, regional performance, and sales channels.
- Performed data cleaning and validation to identify missing values, duplicate records, inconsistent categories, and data-quality issues; documented 431 records with sales discrepancies exceeding INR 1 for further investigation.
- Conducted exploratory data analysis across business dimensions to examine sales and profit patterns and support data-driven performance assessment.
- Developed an interactive Power BI dashboard with KPI cards and slicers for sales, profit, profit margin, returns, and cancellations; analyzed dataset metrics of INR 586.51M in sales and INR 151.50M in profit.

Netflix Content Analytics GitHub

- Built a reusable Python analytics pipeline using Pandas and NumPy to clean and validate 8,807 Netflix catalog records across 12 columns.
- Handled missing values, corrected identified duration anomalies, normalized text fields, converted date columns, and prepared a consistent processed dataset.
- Implemented data-quality checks for duplicate records, unique show IDs, Movie and TV Show duration formats, and residual line breaks; verified zero duplicate rows and zero invalid duration formats.
- Analyzed content types, yearly additions, countries, ratings, and categories; developed a Power BI dashboard with KPI cards, charts, and interactive filters to communicate catalog composition and content distribution.

Professional Development

Strengthening SQL, Excel, and business analytics skills through hands-on practice and end-to-end portfolio projects.
